

ASSIGNMENT 3

Instructions for Students

- Each question must be done in a **separate .html file**.
 - Use **only HTML** — do not include any CSS or JavaScript.
 - Use proper indentation, titles, and comments in each file.
-

1. Create an HTML file that embeds a **YouTube video** using an **<iframe>**.

Set the **width** and **height** using only percentage values (not pixels) to make it adjust when resizing the browser.

2. Embed a **Google Map** showing your school or city using an **<iframe>**.

Use **title**, **width**, **height**, and **loading="lazy"** attributes. Add a comment explaining what the **loading** attribute does.

3. Create an HTML file with **two iframes** displayed one below another:

- The first iframe should display your introduction page.
- The second iframe should display your favorite hobby page.
Use **width** and **height** attributes to make them look balanced.

4. Create a **frameset layout** using **<frameset>** and **<frame>** tags:

- Top frame → Navigation links (Home, About, Contact)
- Bottom frame → Displays a message "Welcome to My Website"
(Use only HTML — no CSS.)

5. Create a web page that includes a **complete <head> section** with:

- **<meta charset="UTF-8">**
- **<meta name="author">**
- **<meta name="viewport" content="width=device-width, initial-scale=1.0">**
- **<title>**

Below, add a paragraph with English, Hindi, and Japanese text to verify UTF-8 encoding.

6. Create a **User Registration Form** with the following fields:

- Full Name
- Email Address
- Password

- Confirm Password
Make all fields required using the **required** attribute.

7. Build a **Login Form** with fields for username and password.
Add a hidden input field with a dummy CSRF token value.
Write an HTML comment explaining the purpose of a CSRF token.

8. Design a **Feedback Form** that includes:

- A textarea for feedback
- Radio buttons for rating (Good, Average, Poor)
- A submit button
Use **method="post"** and **action="#"**.

9. Create a **File Upload Form** where users can upload only **.jpg** or **.png** files.
Use the **accept** attribute to restrict file types.
Include a short note in a **<p>** tag describing what kind of files are allowed.

10. Create a **Contact Form** with the following:

- Full Name
- Email
- Subject
- Message (textarea)
Use the **placeholder** and **required** attributes properly.

11. Design a form that collects **student information** — Name, Roll Number, and Course.
Use a **<select>** dropdown for choosing a course.
Include an option that says "Select Course" as default (disabled and selected).

12. Create a paragraph that uses **HTML entities** to display:

- **<, >, &, ", and '**
Also include **©, ™, and ®** symbols using entities.

13. Create a webpage that includes text written in **three languages** (English, Hindi, and French).
Add **<meta charset="UTF-8">** inside **<head>** to ensure proper rendering of all characters.

14. Use an **<iframe>** to embed an external website (e.g., **https://www.wikipedia.org**).
Below it, write a paragraph saying:
"Some websites may not allow embedding for security reasons."

15. Create a **Payment Form** with fields for:

- Cardholder Name
- Card Number
- Expiry Date
- CVV

Add the **required** attribute to all fields and include a “Pay Now” button.

16. Create a webpage that demonstrates **URI encoding**.

Add a hyperlink that includes special characters in its URL, for example:

`https://example.com/search?query=HTML & CSS`

Write the correct encoded version of this link using **%20** for spaces.

17. Create two HTML files:

- **form.html** → Contains a form with a text input and a submit button.
- **result.html** → Displays a message “Form successfully submitted.”
Use an **<iframe>** in **form.html** to load **result.html** after clicking Submit.

18. Write a paragraph that includes both **long and short quotations**:

- Use **<blockquote>** for a long quote.
- Use **<q>** for a short quote inside another paragraph.
Also include one HTML entity in the quote (e.g., **&**, **<**).

19. Create a web page demonstrating **HTML form security attributes**:

- Add **autocomplete="off"** to the form.
- Use **required** on all input fields.
Below the form, write a note explaining why turning off autocomplete can improve security.

20. Create a page that includes **all important <head> elements**:

- **<title>**
- **<meta>** (charset, description, author)
- **<base>** (to set base URL)
- **<link>** (to favicon or other resource)
- **<style>** (can be empty)
- **<script>** (can be empty)

Add comments explaining what each tag is used for.
